

**Technical Information N°005 :**

**Subject : Rudders Setting**

Dear Competitors,

Please find below some informations on the rudders' angle setting. The rudders's angulation are adjustable on the Sun Fast 30 OD through the bars.

The basic setting provided by the boat designer (i.e. VPLP Design) is a **length of 1660 mm calculated from one trailing edge to another**. At the handover, the boats will be set according to this value.

This setting is valid for most of the conditions. However, in downwind and breezy conditions we suggest to adjust the angulation outward through turning the bars 2 to 3 turns. Please be cautious while adjusting the bars and not going too far on the threads. The risk would be disconnecting the rudders.

NB : all boats are provided with a spare tiller.
